Description:

GLP-1 treatment plans are medically guided and personalized to your health profile to support sustainable weight loss. They may help reduce appetite, support weight loss, and improve blood sugar control as part of a structured care plan. Unlike generic approaches, your treatment includes licensed provider oversight, ongoing adjustments, and continuous support to improve consistency and outcomes. Start your free telehealth consultation to see if a personalized GLP-1 plan is right for you.

What’s included with my plan?

Every Healsend plan is personalized to you. After reviewing your health profile, a licensed provider creates your treatment plan. If appropriate, you’ll receive a tailored dosing schedule and prescription shipped directly to your door via a state-licensed pharmacy. You also get 24/7 messaging access to your care team for ongoing support.

What treatment options do I have?

You’ll be matched to a personalized GLP-1 program based on your goals, medical history, and eligibility. Options may include different medications and dosing plans optimized for weight loss. We’re also expanding into oral GLP-1s and peptide-based programs for patients who are not suited for GLP-1s or want more targeted fat-loss support.

What if I need to cancel?

You can cancel anytime in your patient portal with no fees or long-term commitments. Cancellation stops future billing, but does not affect orders already sent to the pharmacy. For pending orders, contact care@healsend.com for support.
